

Queries

Basic commands to retrieve information from a database

```
SELECT *  
FROM movies;
```

SELECT

Query all rows and columns from the `movies` table

```
SELECT name, genre  
FROM movies;
```

SELECT

Query data in columns `name` and `genre`

```
SELECT imdb_rating AS 'IMDb'  
FROM movies;
```

AS

Rename the `imdb_rating` column to `'IMDb'`

```
SELECT DISTINCT genre  
FROM movies;
```

DISTINCT

Query distinct values of the `genre` column

```
SELECT *  
FROM movies  
WHERE year > 2014;
```

WHERE

Filter the result to only include rows where `year` is greater than 2014

- `=`, `!=`, `>`, `<`, `>=`, `<=`
- `BETWEEN 1990 AND 2000`

```
SELECT *  
FROM movies  
WHERE name LIKE 'Se_en';
```

- `IS NULL`

- `IS NOT NULL`

LIKE

Select movies with names that start with `'Se'` and end with `'en'` and have exactly one character in the middle

```
SELECT *  
FROM movies  
WHERE name LIKE 'A%';
```

LIKE

Select movies with names that start with letter `'A'`, followed by any number of characters

```
SELECT *  
FROM movies  
WHERE year BETWEEN 1990 AND 1999  
AND genre = 'romance';
```

AND

Select movies where both conditions are true: `year` is in the 90's and `genre` is romance

```
SELECT *  
FROM movies  
WHERE genre = 'romance'  
      OR genre = 'comedy';
```

OR

Select movies where at least one of the conditions is true: `genre` is 'romance' and `genre` is 'comedy'

```
SELECT name, year, imdb_rating  
FROM movies  
ORDER BY imdb_rating DESC;
```

ORDER BY

- `ASC` sorts the result in ascending order
- `DESC` sorts the result in descending order

```
SELECT name  
FROM movies  
LIMIT 10;
```

LIMIT

Specifies the maximum number of rows that the query will return

```
SELECT name,  
CASE  
  WHEN imdb_rating > 8 THEN 'Fantastic'  
  WHEN imdb_rating > 6 THEN 'Poor'  
  ELSE 'Avoid at ALL Costs'  
END AS 'Review'  
FROM movies;
```

CASE

Creates different outputs by evaluating its conditions sequentially and stopping with the first condition whose condition is satisfied

```
SELECT name AS 'Name',  
       year AS 'Year',  
       imdb_rating AS 'IMDb'  
FROM movies  
WHERE year > 2000 AND  
       imdb_rating > 8  
ORDER BY imdb_rating DESC  
LIMIT 5;
```

Review

Check out the order:

1. `SELECT` as many columns as you want
2. `FROM` indicates which table
3. `WHERE` filters the query
4. `ORDER BY` sorts the query
5. `LIMIT` reduces the number of results
